In the spring of 2014, the "University of Tokyo Kashiwanoha Campus Station Satellite" was opened in front of the TX Kashiwanoha-campus station as a center for social experimentation hosted by the University of Tokyo Future Center Initiative.

Basic research, operational research and development of human resources for social experimentation are conducted at the satellite, which houses university laboratories, collaborative research entities, and an administrative support organization. Companies from outside of academics are invited to rent space at the satellite for collaborative research. The satellite is operated by the Future Center Initiative.
